

e-system enterprise-wide

The Foundation to Automate your Environment

Solve the unique challenges of running a petroleum business with Automated Wireless Environments Enterprise -Wide Petroleum Management Software Solutions.

Streamline your petroleum logistics operation with the E-system. With over 35 years of experience and knowledge of the petroleum industry our solutions will empower your entire organization with a comprehensive suite of software that gives your personnel access to vital customer information immediately.

The E-system offers a common platform for operational data, security, workflow, analysis and reporting. The E-system has set the standard for stability and scalability that is required to run today's petroleum operations. The E-system is your one stop to manage Accounts receivable, degree day forecasting, delivery scheduling, pricing, billing, collections, reporting, invoicing, taxing, inventory, budgets, customer ranking, service billing, service history with full integration to our onboard wireless for delivery trucks, service vans, transport trucks, fleet fueling.

The latest edition of E-system Enterprise Software includes these powerful application add-on features to further automate your environment:

- Automated Credit Card Processing
- Automated Electronic Funds Processing
- Automated Emailing module allows you to email statements, invoices etc in batch.

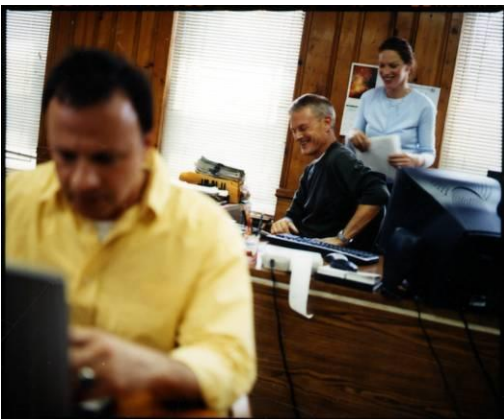

- Instant Web Portal application plugs right in to your existing website giving customers access to their accounts with bill pay.
- **Autowire** module connects your E-system to all of your vital third party applications in real time.
- E-sys smartphone module allows you to access the E-system from your smartphone instantly.
- Enhanced 2009 version of GPS/AVL offering more robust features with reporting and mapping.
- Embedded tank monitoring integration and reporting available directly inside the application.

The E-system is an easy-to-use enterprise software that helps your staff manage your customers and sales more effectively. Empower your staff with the information and tools they need to respond to customers immediately.

Connect to Customers

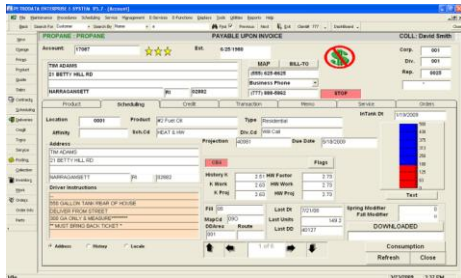

Use the E-System to track and manage your accounts, and sales.

- **Customer information in one place.** Your staff has all activity related to your accounts in one place. All information such as: Product, Taxing, Degree Day, Scheduling, Credit, Collection, Transactions, phone calls, memo's, orders and account information is visible from the account screen.

- **No headache design.** The application is well organized with clean display screens that are not crowded. Users can access information immediately without having to dig through multiple screens to access customer data. Designed using Windows, the E-system is a powerful tool that will drive business efficiency and productivity for years to come.

E-system is the best choice when it comes to the smoothest possible transition from your legacy system. With the E-system your staff can spend less time working with the software and more time where it counts—working with customers.

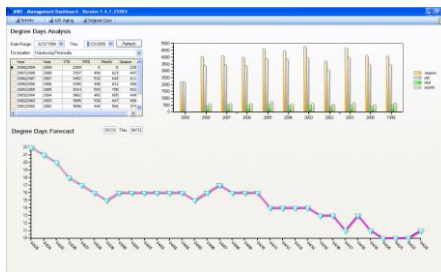

Use the E-system to consolidate all customer-related information in one place.

- **Powerful statistical analysis.** The integrated Report Genius query analyzer allows users the ability to run queries against the SQL database. The results of these queries create any report you could possibly need. The E-system also has tons of built in reports along with an extended sales history module that gives users the ability to query financial data instantly. With full integration to Microsoft products in seconds you can have any report exported to Word or Excel for further formatting and analysis.

Advanced Scheduling Algorithms create more profit with fewer deliveries

Reduce costs, save time and money with the E-system Advanced Scheduling Degree Day Module.

- **Reduce costs.** With over 35 years experience as a degree day software company you can rest assured the E-system will detect as close as possible your customers demand for energy. All your staff needs to do is enter the daily degree day numbers from your weather bureau or degree day clock and the application will do the rest. The module maintains detailed algorithms that go above and beyond your generic degree day software. The application separates heat and hot water usage and reacts to seasonal temperature fluctuations. The module even takes into consideration history, spring and fall modifiers, averages and even your customer's personal habits and fluctuations. The E-system Advanced Scheduling module is a sophisticated flexible degree day system that is guaranteed to decrease your number of deliveries and save you money.

Use the Advanced Scheduling Module to predict your customers demand for energy.

"For just the month of January using the E-system Advanced Scheduling Module and the AWD Wireless Delivery System we were able to deliver 150,000 more gallons, we had 1200 less deliveries and we averaged about 50 gallons more per stop."

Paul Rzeszutowski, Energy Division Manager
Western Reserve Farm Cooperative

This data was compared to the January a year prior using a competing Back Office Software and wireless system.

The Scheduling module is deeply integrated with our AWD Wireless dispatch application giving your field staff full interconnectivity to the data they need in the field. The system handles automated presets, real time price changes, global price changes, message updates and so much more. Complete point of sale delivery ticket processing and automatic posting to E-system.

Service Module allows you to control your service department

The E-system Service Module will transform your service department by automating the last mile of the service chain giving users the tools they need to manage your service department.

Service

- **Contract Management.** The system handles all of your service agreement management, pricing, engineering information and inventory.
- **Inventory control.** The system tracks all of your parts and inventory. As an add-on through the Autowire Module the system can connect to your parts supplier for automated parts replenishment.
- **Wireless Integration.** The service module is deeply integrated with our AWS Wireless Service dispatch application giving your field staff full interconnectivity to the data they need in the field. The system handles automated after hour's night call generation from the field automated dispatching board with alerts and alarms for job overruns and technicians in standby. Complete point of sale work order

processing, bar-coding of parts and so much more.

Complex customer ranking module improves decision making instantly.

Your staff can not only open an account and see what is in their tank. They can see their rank! Exclusive to the E-system and vital to your business is the ability to instantly know who you are dealing with. With the E-system ranking module each account is scored by a proprietary formula developed over 35 years. Your staff simply opens the account and instantly sees a 1-5 star score. The module can also be customized, allowing your administrators the ability to set the data parameters that fit your business. Never lose a profitable customer again because of bad decision making. Another way the E-system stands apart saving you time and money.

Communicating with customers has never been easier and more affordable.

Reduce mailing costs with the E-system Automated Emailing Module

- **Instantly respond to customers.** Communicating with customers through e-mail messages needn't be complicated. Use the E-system Email Module to create and send e-mail messages that look great. You do not have open your email to send? That's right! The emailing module is designed the way it should be, no more saving the document to your desktop opening your email program composing a new message, attaching file and finding customers email over and over all day long. How much time is wasted by unnecessary steps? If a customer needs a copy of their invoice it takes 1 click and it is

emailed instantly from within the account right from the invoice. Emailing is completely automated and the senders email, copy to or blind cc message headers and email body messages are automatically populated and document attached. The module automatically merge's your customer's data, you literally just click email once and it's done! With the Advanced Emailing Module you can eliminate postage costs by not only emailing a single email but by batch emailing Invoices, Statements, Budget Statements, Renewals, Overdue, Credit Card Charged, Declined, Customer Care follow ups and Dunning letters. Many other communications can be emailed. Another way we save you time and money.

Connect E-system to your vital third party vendors

Use the Autowire Module to connect to third party applications.

- **Extend your investment** in third party applications with the Autowire Module. This module enables rapid implementation and allows complete integration with your third party applications. Unlike most petroleum software companies on the market that hold you hostage to an all or nothing approach and refuse to work with other viable solutions that become available on the market AWE takes the opposite approach. We offer clients the flexibility, respect and know how to integrate the E-system to other vital IT assets and third party providers, creating more of a partnership than a dictatorship.

We pride ourselves on our "Partnership Mission Statement" and working together to create the ultimate technologies and solutions for our clients. AWE not only integrates to third party vendors outside our product offerings we actually integrate our products with most of our direct competitors on the market today. This demonstrates how truthful and serious we are about being a partner with our clients.

- **Gather and Share information more efficiently from third party applications.** E-system with the Autowire module acts as your centralized foundation interfacing to all of your third party systems allowing you to enhance your technology investments and work more efficiently. Autowire module interfaces to applications such as:
 - Downstream pricing with Axxis, Opis, DTN integration
 - General ledger applications with integrations to Microsoft GP, Accpac, Peachtree, Sage Mas 90 and Business Works.
 - Financial Institutions with EFT and CC integrations, Check Scanning
 - Risk management applications with Oil Well interface
 - Your web site with AWE Customer Web Portal and Web Reporting for your clients.
 - E-system smartphone application
 - Third party web and hedging applications such as Destwin Integrated Web & Business Management Software
 - Tank monitor Integrations to all major vendors on the market

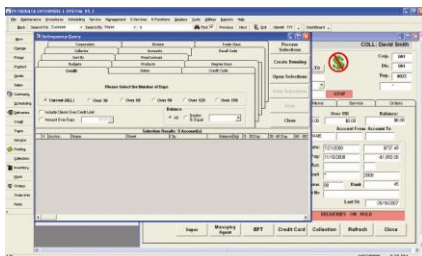

- Routing Optimization applications such as UPS logistics and Vertrax

Just another way the E-system helps to extend your investments and make your technology work for you.

Connect Users and Information

Use the E-system Collection Module to handle your collections in house.

- **Manage collections efficiently** Now you can efficiently handle the increasing volume of collection issues on your own without giving your 50% away to collection agencies. Contending with the ever-increasing volume of bad debt can be an annoying, time-consuming distraction. Handle the collection process more efficiently and respond to changing business conditions more quickly with our Collection Module.

Handling collections is simple with the innovative Collection Module.

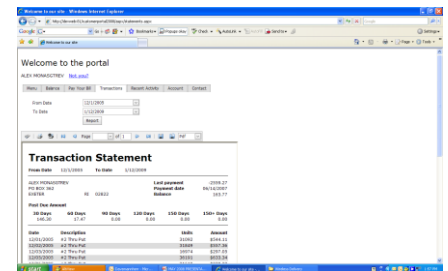

The module includes a complete contact management database to assist your collections department in managing follow up calls, correspondence and callbacks. The module works together with the emailing module to automate collection letters and follow up letters with a click of the mouse. Using the unique automated email modules merge feature your messages for each stage of the process of collections is also automated with just a click of the button. Another way the E-system will save you time and money.

Connect your customers and Information

The E-system Customer Portal application takes the management of data to the next level.

- **How much money and time is wasted** by customers tying up your CSR's time asking for their account balance, recent activity, statements or paying a bill etc? Those days are over. Now with the E-system Web portal customers can log in securely to their own account and access detailed data and history simply over the web. Customers can even pay you instantly with Bill Pay. Customers demand instant gratification and expect your company to provide the same services they have come to know

from their Bank, Phone Company, Cable Company by having the ability to access their accounts online.

The Web Portal puts a world of information within your customers reach.

The web application was designed to be as simple as possible. The portal is attached to your existing site and is unbranded to keep with your existing design.
