

AWT transport

Automate your transport division with onboard wireless

Solve the unique challenges of operating your transport division with Automated Wireless Environments AWT onboard wireless transport solution.

Streamline your transport operations with AWT. The Automated Wireless Transport application is a reliable secure system designed using Windows Server, Windows Mobile 5.0 and Microsoft's SQL. The AWT application allows effective monitoring and control of your transportation fleet. The system was designed from the ground up exclusively for petroleum transport divisions. For over 18 years large and small petroleum distributors across the United States and Canada have been realizing huge increases in profit with our established wireless solutions.

Our AWT solution will empower your entire organization and give your personnel the tools they need to properly manage your supply chain. The application offers managers and dispatchers the ease, security and accuracy of managing distribution logistics.

Stay Connected in real time to the transport fleet.

Use the AWT application to make changes on the fly.

- **Real time connectivity** gives dispatchers the ability to immediately connect to any transports on board computer to update an order, terminal, supplier, instructions etc. Orders or loads can be moved from one truck to another in

seconds all in real time from your desk.

AWT Compartment Inventory screen

- **Capture the vital data** you need without paper. With the on board computer (shown above) you can capture the BOL information, comments timestamps, stick readings, water readings, temperature capture, gravity readings, additives and blends and report this back to the AWT control center. Loads and sources are assigned and sent to the trucks and reported back to the office in real time. This important feature greatly reduces the billing cycle and eliminates costly data entry errors.

Connect AWT to your vital third party vendors

AWT works together with your existing technology investments.

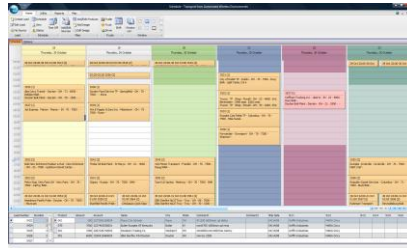

- **Extend your investment** in third party applications with the AWT application. The system seamlessly integrates with our E-System enterprise application or to your existing back office software.
- **Data can be exported to the web** with our AW web reporting module or data can be shared with your website directly.
- **Tank monitoring data** can be integrated with the application.

Scheduling has never been easier

Use the AWT to simply maintain schedules and shifts.

- **Simplified design.** The application is well organized with clean display screens that are not crowded. Loads are simply dragged and dropped on the scheduled date, time and shift. Data can be sorted instantly by user preference. Users can access information immediately without having to search through multiple screens. The system color codes the current status of order/loads and provides Outlook style alerts to notify dispatch in real time of mission critical situations. Dispatch has total control of

their supply chain with a single glance at the schedule board.

Use the AWT advanced schedule to organize schedules.

The AWT application is a powerful tool that will drive business efficiency and productivity for years to come.

AWT features

Below is just some of the latest features AWT provides to automate your transport environment:

- Integrated AD Hoc Report writer with full integration to Microsoft Word or Excel for further formatting and analysis.
- On Board Hazmat Audible Navigation embedded into the mobile application.
- Drag and Drop scheduling of loads and orders with multiple shifts.
- Asset management of trailers, trucks and drivers.
- Image up-loader allows drivers to access images or schematics of fill locations.

- **Connect to all of** your vital third party applications such as tank monitors, payroll, freight billing.
- Integrates with PC Miler trucking and logistics products.
- Enhanced 2009 version of GPS/AVL offering more robust features with reporting and mapping and plotting.
- Remote Manager provides real time access to on board device for updates and support assistance.
- Locked scheduling views and web interface for sales staff.
- Time off feature allows the scheduling of trucks off for maintenance and alerts dispatch asset is unavailable.

The AWT application is easy-to-use software that helps your staff manage your customers and sales more effectively.
